The user should also have an option to reset their password on this page.

Inputs:

- Stored account information
- Uploaded files
- Project description
- Project title
- Project status updates

Outputs

- Project Status updates

Type of software

- Project management software

Non-Functional Requirements

1. The website will be responsive and intuitive.
2. All stored data and account credential will be secure.
3. The website will be consistently available to the user. There will be minimal failure or unavailability.

4. The design of the website will be cutting edge and modern.
5. The website homepage will incorporate the company logo.

Design constraints:

- Must be compatible with popular browsers (Chrome, Internet Explorer, Safari).
- Must retain desktop functionality on mobile devices.

Commercial constraint

- One person will be working on this project in the beginning.
 - Manpower and time will be limited.
- When the website is ready to be scaled and publicized, the cost of a server will be discussed.
-
